WhatNext Vision Motors: Shaping the Future of Mobility with Innovation and Excellence

Project Overview:

WhatNext Vision Motors is in the automotive industry and is dedicated to transforming the mobility sector with innovative technology and solutions that prioritize the customer needs. This implementation aims to create a more efficient ordering system that reduces potential errors and improves overall customer service. This system integrates intelligent dealer recommendations, real-time stock validation, and automated status updates for orders. This makes the ordering process seamless and efficient. Customers select the nearest dealer and can only order available vehicles. The platform reduces effort, cuts errors, and makes the service transparent. WhatNext Vision Motors thus provides better customer convenience and operational efficiency, offering a quicker, more accurate, and customer-oriented mobility solution.

Objectives:

The main goal of WhatNext Vision Motors is to implement a customer-centric system that enhances the overall ordering and service experience. It should automate the important processes, such as dealer selection, stock validation, and order status update, in order to reduce manual workloads and increase transactional accuracy. Eventually, the CRM must provide clear business value by strengthening customer satisfaction, improving operational efficiency, minimizing errors, and enabling strategic decision-making at higher levels in the company. The CRM must give a clear business value enhancing the customer satisfaction, improving operational efficiency, minimizing errors, and enabling strategic decision-making in the company.

Phase 1: Requirements Analysis & Planning

Understanding Business Requirements

WhatNext Vision Motors needs a system to optimize customer convenience and order accuracy while also arranging several aspects of the dealership's business operations. The challenges customers experience is dealing with finding the nearest dealer, not being familiar about how to place an order for an out-of-stock vehicle, and receiving insufficient information of the status on

their order or test drive. WhatNext Vision Motor CRM streamlines operations by workflow of the system such as orders are assigned to the nearest dealer, out-of-stock vehicles, stock levels, and order statuses are connected through Apex triggers, scheduled, and batch updates. The automated reminders for test drives and updates on the status of orders reduce errors and reduce manual effort while increasing the customer satisfaction and improving in dealerships.

Project Scope and Objectives

The scope and objectives of WhatNext Vision Motors:

- Increase client interaction by implementing organized procedures
- Process car orders automatically
- Monitor test drives with scheduling and status updates
- Handle service requests effectively.
- Automate processes to lessen dealer workload.
- Use dashboards to deliver insights in real time.
- It guarantees role-based and secure data access

Design Data Model and Security Model

WhatNext Vision Motors CRM is based on six custom objects:

- Vehicle
- Vehicle Dealer: It handles Vehicle Customers
- Vehicle Customer: Customers can place multiple orders
- Vehicle Order: Customers can have multiple orders and service requests
- Vehicle Test Drive: Customers can request a test drive
- Vehicle Service Request: The service request is linked to the Vehicle and Customer

Stakeholders Mapping

Stakeholders in a Vehicle CRM:

- Dealership Manager: Manage all operations
- Vehicle Dealer/Salesperson: It handles customers, test drives, and places orders
- Customer: Indirect interaction via data input by employees
- System Admin: Responsible for Salesforce configuration, security, and development

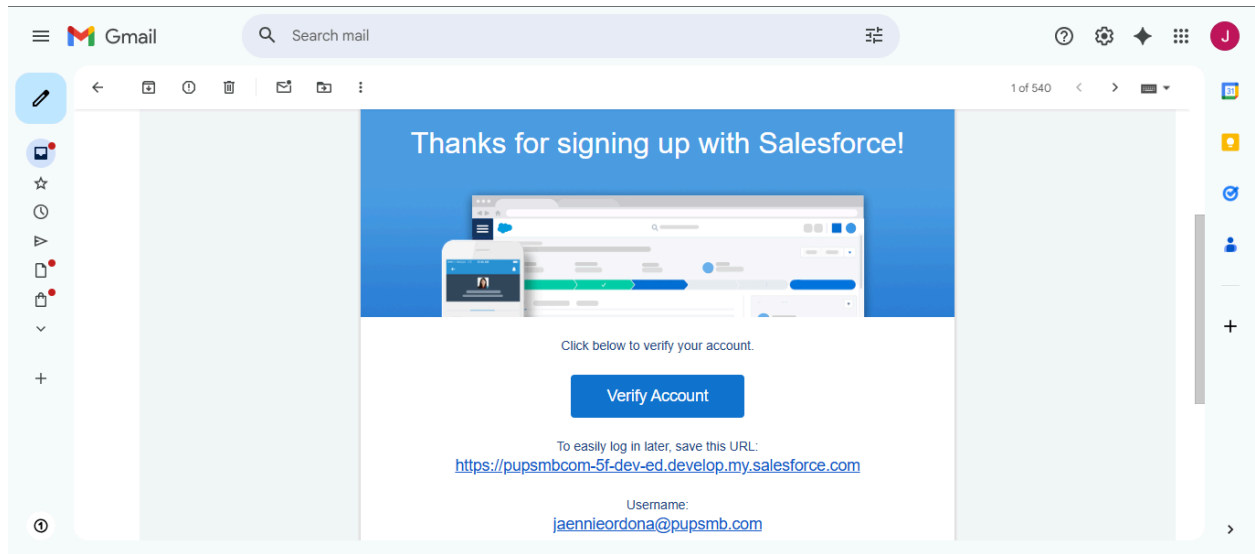

Execution RoadMap

- Create a custom object and fields
- Create Lightning App
- Build a automation flows
- Implement Apex logic
- Testing the WhatNext Vision Motors
- Documentation completion

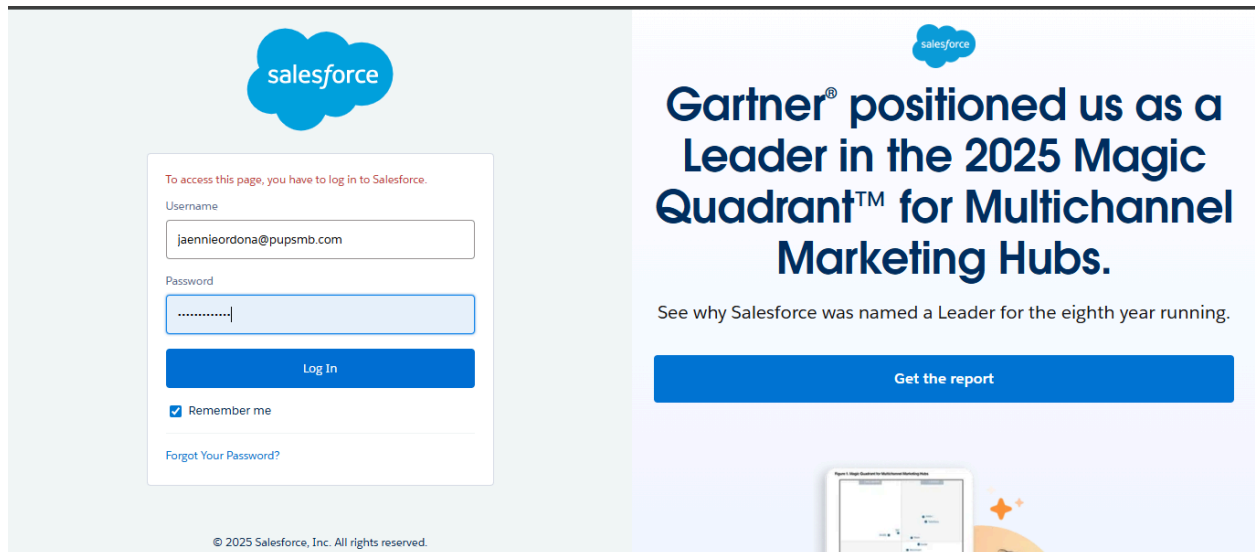

Phase 2: Salesforce Development — Backend and Configurations

Set up environment & DevOps workflow

Apex Classes & Triggers

VehicleOrderTriggerHandler

```
1 public class VehicleOrderTriggerHandler {
2
3     public static void handleTrigger(List<Vehicle_Order__c> newOrders, Map<Id, Vehicle_Order__c> oldMap) {
4         if (isBefore && (isInsert || isUpdate)) {
5             preventOrderIfOutOfStock(newOrders);
6         }
7
8         if (isAfter && (isInsert || isUpdate)) {
9             updateStockOnOrderPlacement(newOrders);
10        }
11    }
12
13    // X Prevent placing an order if stock is zero
14    private static void preventOrderIfOutOfStock(List<Vehicle_Order__c> orders) {
15    }
```

VehicleOrderTrigger

```
1 trigger VehicleOrderTrigger on Vehicle_Order__c (before insert, before update, after insert, after update) {
2     VehicleOrderTriggerHandler.handleTrigger(trigger.new, trigger.oldMap, trigger.isBefore, trigger.isAfter);
3 }
4
```

VehicleOrderBatch

```
1 global class VehicleOrderBatch implements Database.Batchable<Object> {
2
3     global Database.QueryLocator start(Database.BatchableContext bc) {
4         return Database.getQueryLocator([
5             SELECT Id, Status__c, Vehicle__c FROM Vehicle_Order__c WHERE Status__c = 'Pending'
6         ]);
7     }
8
9     global void execute(Database.BatchableContext bc, List<Vehicle_Order__c> orderList) {
10         Set<Id> vehicleIds = new Set<Id>();
11         for (Vehicle_Order__c order : orderList) {
12             if (order.Vehicle__c != null) {
13                 vehicleIds.add(order.Vehicle__c);
14             }
15         }
16     }
17 }
```

WhatNext Vision Motors

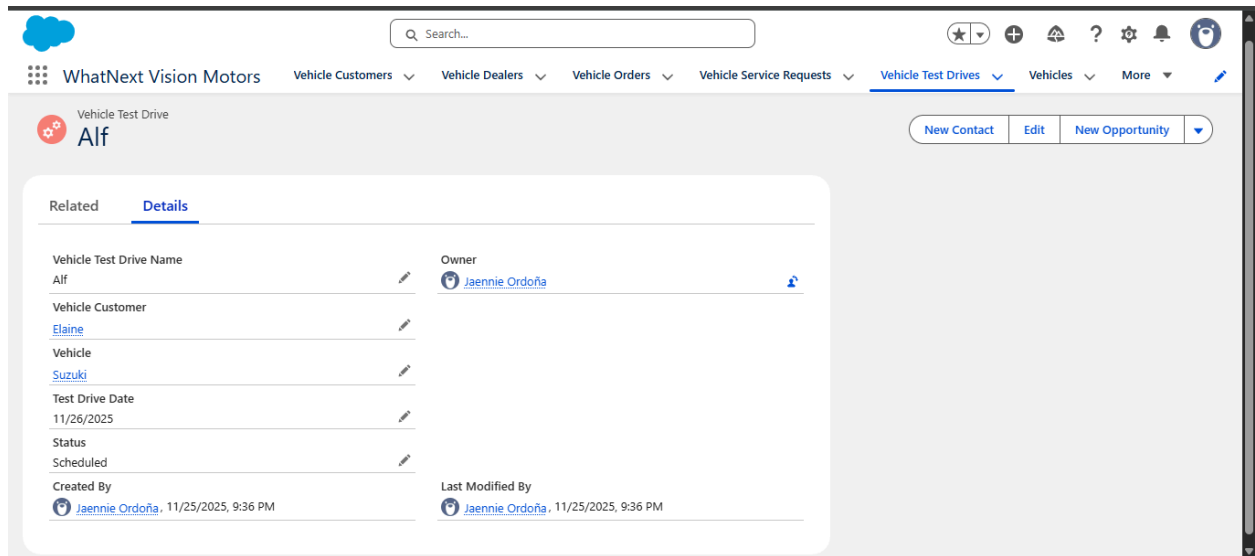

Phase 4: Data Migration, Testing, & Security

Test Cases with Input & Output Screenshots

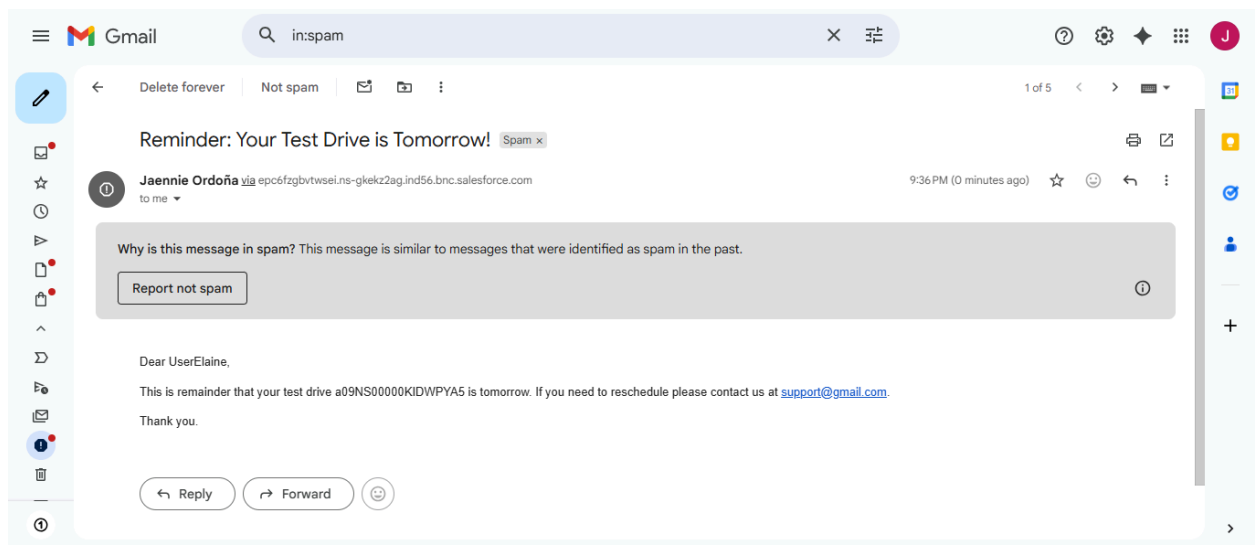

- Test Case 1: Order Creation – Out of Stock

- Test Case 2: Test Drive Reminder Email

• Email Reminder

Phase 5: Deployment, Documentation, & Maintenance

The final phase is all about guaranteeing long-term system stability and implementing the completed Salesforce CRM solution in the production environment. This ensures the deploying of these components are consistently and accurately migrated. After deployment, validation checks are performed to confirm that automations like order assignment, stock validation, and scheduled processes work as expected in the live environment. Comprehensive documentation also gets finalized, defining system architecture, the relationship between objects, automation logic, and what Apex provides to support future administrators and developers. For ongoing maintenance, regular monitoring of system performance is planned, review of scheduled jobs, and adjustments based on feedback or requirements that may come in due course. This ensures

that the CRM remains efficient, scalable, and fully aligned with operational goals at WhatNext Vision Motors.

Conclusion

WhatNext Vision Motors is a streamlined platform with transportation solutions for both customers and dealership companies. It aims to improve the platform's dependability, efficiency, and accessibility. This system shows how technology can innovate the mobility experience with customers. By deploying features such as real-time stock validation, order status updates, out-of-order, and scheduled process with the help of these features the system delivers an easy, reliable, and transparent ordering process. In this way, these innovations reduce customer effort while also ensuring that every transaction is managed with accuracy from start to finish.
